EDUCATION

Vellore Institute of Technology May 2023 – May 2027 (Expected)
B.Tech in Computer Science and Engineering (CGPA: 8.10/10) Bhopal, M.P., India

TECHNICAL SKILLS

Languages: Java, Python, HTML, CSS, JavaScript
Databases: MySQL, Firebase Firestore
Frameworks & Libraries: React.js
Tools & Platforms: AWS, Git

PROJECTS

Om Academy – Coaching Institute Management System | *React, Firebase, Firestore*
tinyurl.com/om-academy June 2026

- Tasked with replacing a coaching institute's manual register-based workflows for 414 students, where attendance, test reports, fee tracking, and course enrollment were paper-driven and prone to reconciliation errors
- Built and deployed a React + Firebase application with a 3-tier role-based access system (Admin → Teacher → Student) using scoped Firestore queries, so teachers access only assigned students' data and students see only their own records
- Automated fee tracking across all 414 students with due-date alerts and overdue flagging, digitizing 6,952+ attendance records and achieving 99.3% on-time collection (3 pending)

Nourishfy – AI Nutrition & Smart Groceries | *React, Firebase, Gemini AI, Tailwind CSS*
tinyurl.com/nourishfy Sept. 2025

- Set out to automate weekly meal and grocery planning for users managing nutritional deficiencies, dietary exclusions, and symptom-driven restrictions - a process that otherwise requires manual cross-referencing of foods against health needs
- Engineered a real-time full-stack app that converts structured health inputs into personalized food plans and grocery lists via the Gemini API, built across 6 Firestore collections with live snapshot listeners, Firebase Auth, and 39 React components including 11 custom headless UI primitives
- Added an image resolution layer using the Wikipedia API with a 5-tier fallback search and Firestore caching, eliminating redundant network calls on repeat lookups and cutting image load latency to near-zero for cached items

IntelliQrHelp – Smart Emergency App | *React 19, Firebase, Telegram API*
tinyurl.com/intelliqrhelp Jan. 2025

- Addressed the gap where first responders reach an unconscious or non-verbal patient with no access to blood group, allergies, active conditions, or next-of-kin contacts at the point of care
- Built a QR-based medical profile system in React 19 and Firestore with Firebase Auth and protected routing, paired with a 1-click SOS flow that pushes real-time distress alerts to designated contacts through the Telegram Bot API
- Delivered full medical context to a responder in a single scan with no app install or login on their side, and kept QR codes permanently valid by syncing them to Firestore so profile edits propagate without reissuing the code

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate June 2026
- AWS Certified AI Practitioner May 2026
- AWS Certified Cloud Practitioner May 2026
- Oracle Certified Java Foundations Associate July 2025

INTERESTS

Cinema & storytelling, exploring local food spots
